

# Artificial Grass Easy Care Tips for Pet Lawns

Artificial grass is SAFE, DURABLE and EFFECTIVE as a lawn and dog kennel surface and it has many incredible uses; outdoors and in!

ANY ARTIFICIAL GRASS STYLE CAN BE USED - what is key would be to only use polyethylene yarns, porous backings, granulated infill, permeable building standards and a top quality installation company.

Artificial grass, when used for your pets, is a super product for dog and other pet areas - IF - you keep up on the maintenance to keep it free from debris & urine odors; just like any other surface in your yard!

**Here's How!**

## Put Together a Grooming Kit

- SCOOPER of some type - the best idea is to get one with a solid head and flat, open pan (as shown)
- GARDEN SPRAYER to apply liquids onto the surfaces of the artificial grass, rock, mulch, pavers
- ENZYME CLEANER - for deodorizing - we recommend OdorMute® (crystals) or any other
- Use 50/50 Water and VINEGAR SOLUTION used for sanitizing your surfaces, where and as needed.

## How to Groom Your Pet Lawn Area

1. Keep the area free of debris and treat for odors, from the start - don't "wait" to treat for odors or allow debris to decompose
2. Clear and then deodorize by applying enzyme liquid to turf; approximately 1 gallon per 500 square feet; do not rinse. Then simply walk away! Spot treat or apply to entire area.
3. With one or two pets, you may want to treat for odor, monthly - with more, use as often as desired. Safe for your pets & you!

Use a "shag carpet" rake or stiff nylon bristle broom to brush up areas where heavy traffic may have caused matting.
